

Amendments to the Specification:

Please amend the specification as follows:

Please replace the first full paragraph on page 10, lines 11-25, with the following rewritten paragraph:

In the comparison/control section 19, where a transmission mean value information S8 is not more than a maximum signal transmission power value S9, a mean value, which is obtained by accumulating the transmission power data S7 for optional constant time (in this case, 320ms) and which is the mean transmission power value S11 [[11]] showing a mean value of actual transmission power (transmitter output) level, is compared with the transmission mean value information S8 to output a data to supplement the difference and to produce a control signal S10 for controlling an attenuation amount of the variable ATT section 14, and where the transmission mean value information S8 is more than the maximum signal transmission power value S9, a data to supplement the difference between the mean value (the mean transmission power value S11 [[11]]) of the transmission power data S7 and the maximum signal transmission power value S9 is output to produce the control signal S10.
